## UFO

The thing that got us interested is we saw a UFO over my town. Because in Georgetown it's surrounded by cornfield and one night me and my brother we were going past our high school and our high school was surrounded by corn and over there we did see a triangular shaped craft in the sky that was floating, it didn't have any airplane noise and it was a triangle,

and it looked like this. And it did have lights at the bottom, I think it was like three, three on each side, and then it had two in the back like this. The color lights were - they were like, they were white, they weren't like multi-colored, you know, they weren't like different, you know, flashing at a concert or anything, they were just one color, they were just white lights. The rest was dark because it was night and it was just going over the corn field and it was going slowly and my brother, after we saw that we watched it and then it just started going up higher and higher and higher and higher and eventually it got out of our sight. But ever since then, you know, we believed in UFO's. **-Lee Reed**
